PROJECTS

Hospital Management System (Full Stack Project)

[Live Demo](#)

- Engineered a scalable full-stack application using Spring Boot and React to streamline hospital operations and patient record management.
- Implemented secure Role-Based Access Control (RBAC) using Spring Security to enforce granular permissions for Admins, Doctors, Nurses, and Receptionists.
- Designed efficient RESTful APIs to facilitate seamless communication between the React frontend and MySQL backend, ensuring real-time data updates.
- Developed automated billing and pharmacy inventory modules to reduce manual errors in invoice generation and stock tracking.

Voting Survey System (Full Stack Project)

[Git Repo](#)

- Developed a secure voting platform using Java (Spring Boot) and React, ensuring data integrity for large-scale surveys.
- Secured the application by implementing Spring Security with JSON Web Tokens (JWT) for stateless authentication and role management.
- Optimized the MySQL database schema and queries to handle high-volume voting data with minimal latency.
